Long Description

Allocations File.

Allocations are handled as follows.

For each allocation, 2 records are kept in the Allocations DB. One for the receipt (or payment in Creditors) and one for the Invoice (or Bill in Creditors). These are cross referenced to each other via an allocationno.

When an allocation is made, two records are added and the balances of the two "parent" transactions are adjusted. The allocation may also be removed. In this case, the "parent" transactions balances are adjusted back up and the two associated allocation records are deleted.
